## Layers Tool Enhancement Request Add "Layer Settings Lock" Check-box

To prevent accidental changes to layer settings, we would appreciate the addition of a check-box in the footer of the Layers dialog (see illustration below) that would prevent the user from making any changes to either layer visibility or selectability.

If a user wants to change visibility or selectability, they would simply need to uncheck the appropriate check-box in the footer first, make the changes, then re-check the check-box in the footer.
