Team Configuration

- Permissions
- Operation Behavior
- Event Handling (unconfigured)
- Iteration Types
- Timelines

Permissions

Configure which actions are permitted for each role. A user can perform all actions granted to any of their assigned roles. All users in a repository have the implicit "Everyone" role. When a team customization grants permissions for a role, those permissions will apply only in that team area and any child team areas. A team customization can remove permissions from a role by reconfiguring an operation with less permissions.
