As a follow-up on assets from my 2D email, I have also been asked in demos and I still don’t have an answer, what about 3D

As it relates to the 2D but in 3D, is there not a way to go from clicking on an asset in this list to the 3D asset that is the model in the viewer?

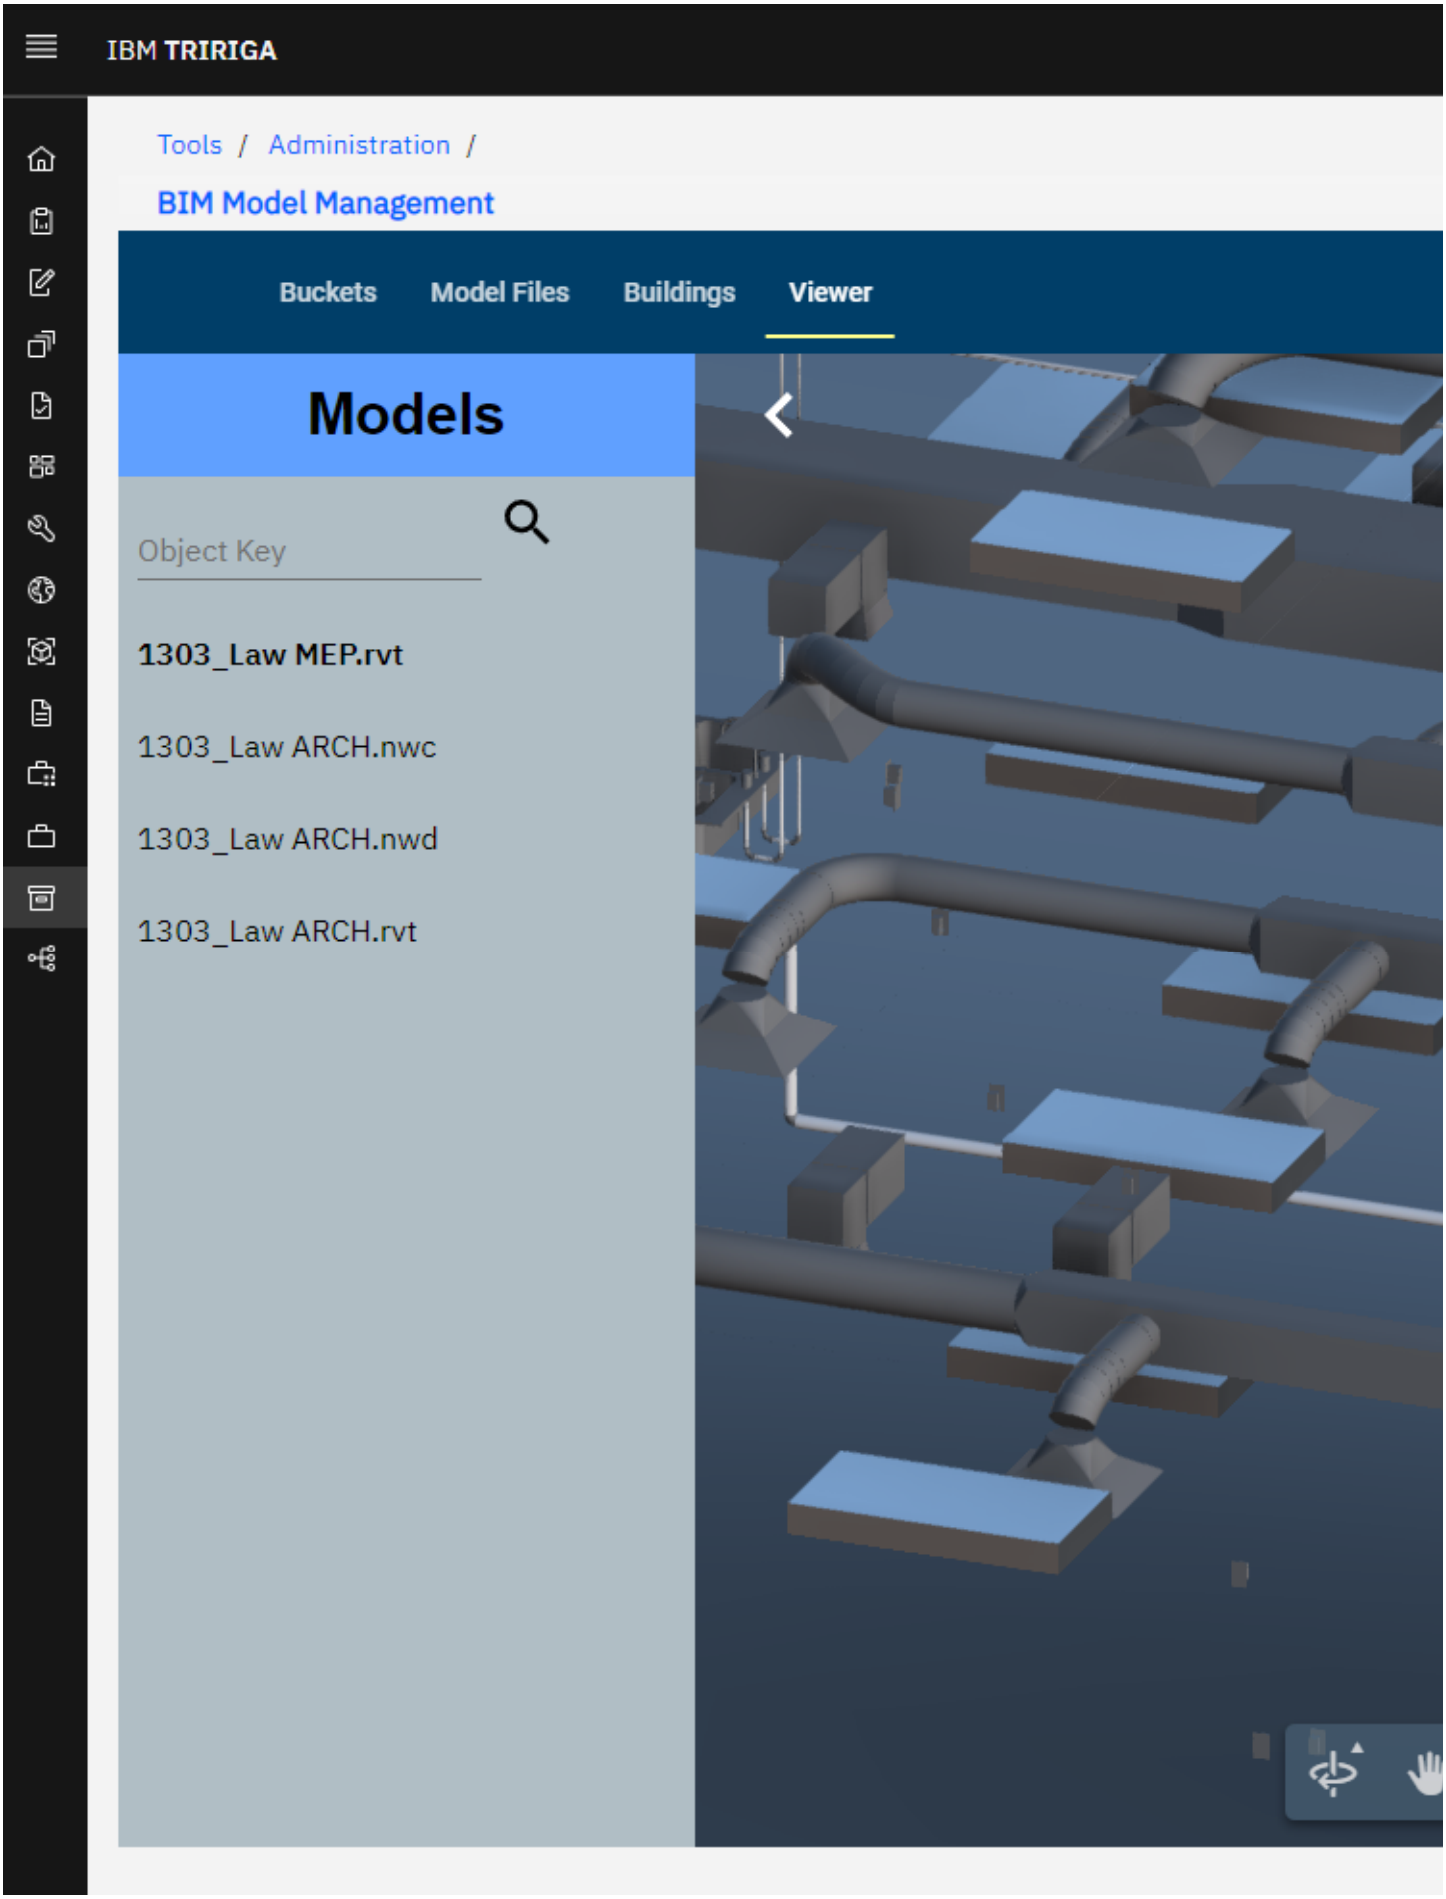
…and then the reverse, how do I go from the model and this linked asset to its asset data in TRIRIGA? I think the answer is you don’t cause the viewer is segregated from the actual TRIRGA asset data.



IBM TRIRIGA

Models
Object Key
1303_Law MEP.rvt
1303_Law ARCH.nwc
1303_Law ARCH.nwd
1303_Law ARCH.rvt

Even though I think we should be able to publish from Revit with linked files or have some process like that work, I do want to question the Navisworks upload as well.
I question why the TRIRGA BIM Help Guide talks about NWC files (left) vs. NWD files (right)? At least NWD files have the asset data that allows me to look up names so I can go back to the Assets in TRIRGIA and connect the dots between assets since I cannot find a process that links between them.
