# Use case description

- Add custom workflow with three state in RQM project (Draft, Approved)
- Create a test case (TC1) and set the state to “Approved” (The test case has passed all the technical reviews and can be used. It should not be modifiable).
- Create a test script (TSC1) and fill it.
- Link the approved test case (TC1) with the created test script (TSC1)

## Expected

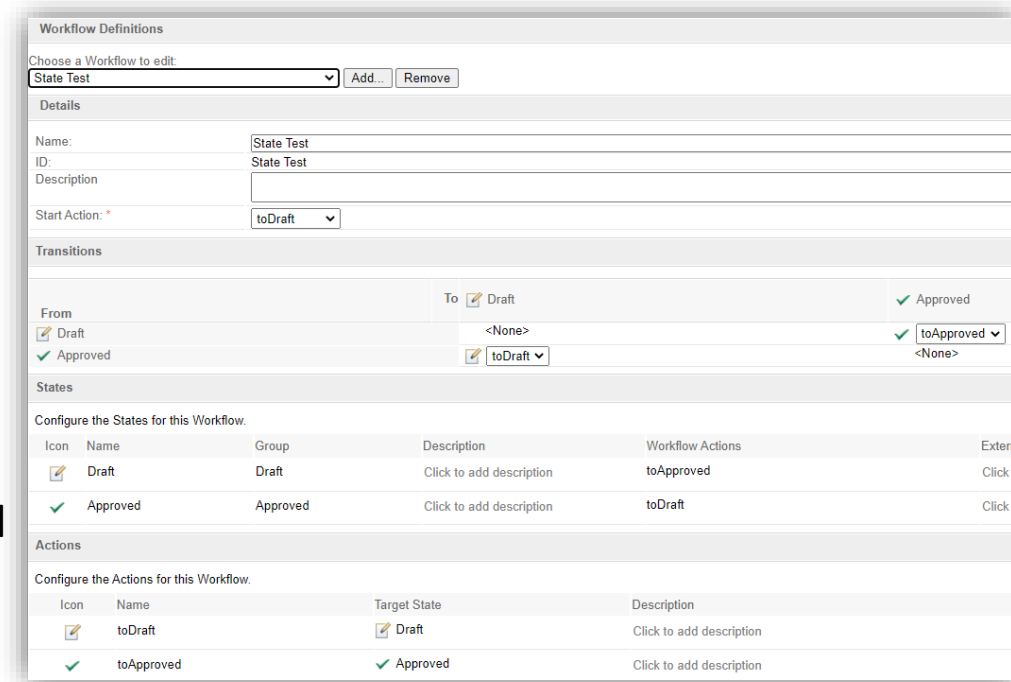

- The link is created (We want to link test scripts only with approved and frozen test cases).

## Actual result

- The link is not created. The following error message is shown :

 The test script cannot be associated with the test case. [hide details](#) 

The test case cannot be saved. 'Save Test Case' Failed. **Disallow Saving of Test Cases with State Approved or Retired** - Precondition not met: Modifications to Approved, Published, or Closed artifacts are not allowed. This artifact is in an Approved state
