Maximo Application Suite Work Order Tasks in Support of Life Sciences

Background

Job Plan records are treated as maintenance and calibration instructions to perform work similar to paper procedures in Life Sciences industry. The electronic revision control and an accompanying business process is typically put in place to maintain accurate work instructions to work on GxP related assets and instrumentation. Once a Job Plan record has been activated, its latest revision is considered an approved procedure to execute work. Out of box Maximo Application Suite copies the active job plan tasks to the target work order; however, job plans task descriptions are editable at the work order level.

User Story 1

Maximo users would benefit from work order task descriptions being ready-only for PM-based work orders thus recognizing latest revision active job plan tasks' descriptions.
