

Maximo Application Suite Test Automation Framework in Support of Life Sciences

Background

Life Sciences software testing has rigorous requirements. Such testing requires significant efforts and resources. Automating software testing reduces testing execution burden. IBM provides Test Automation Framework for out of box Maximo Application Suite; however, the provided test cases do not include a traceability matrix depicting this software requirements were tested by which test case.

User Story 1

Software testing engineers and quality assurance teams would benefit from a traceability matrix to be included with Test Automation Framework for Maximo Application Suite.

Solution Requirements

1. Provide a detail listing of requirements and related test cases in a form of traceability matrix as part of Test Automation Framework for Maximo Application Suite
