

Maximo Application Suite Task Completion in Support of Life Sciences

Background

In a typical Life Sciences environment, there is a high scrutiny in place for approved work order tasks completion. Out of box Maximo Application Suite provides functionality to process work order task completion via Change Status button which is time consuming and not user friendly to process a large number of tasks.

User Story 1

Maintenance, production, and calibration technicians would benefit from being able to track task completion status in a streamlined fashion similar to Maximo Mobile functionality.

Solution Requirements

1. Ability to mark work order task as completed via a single-click pushbutton or a required yes/no selection in Maximo Application Suite
2. Ability to mark work order task as not completed via a single-click pushbutton or a required yes/no selection in Maximo Application Suite
3. Ability to provide comments directly on a work order task in Maximo Application Suite
4. Ability to provide comments directly on a work order task which has been marked as not completed in Maximo Mobile
5. Ability to mark a job plan record to require task comments if those are not completed once propagated to work order in Maximo Application Suite
