Maximo Application Suite End of Calendar Month Due Date Calculation in Support of Life Sciences

Background

For Life Sciences preventive maintenance (PM) next due date value is a critical piece of information as it is related to PM compliance metrics and drives a number of business processes. Over the previous years, Maximo system did not support a popular requirement of end of calendar month due date calculation. Maximo Application Suite addressed the issue by introducing system-wide variable (mxe.pm.enforceMaximumDayOfMonthContinuity).

User Story 1

Various sites and business units under one Maximo Application Suite organization would benefit from an ability to tailor the system configuration to either use or not use end of calendar month due date calculation for their specific needs.

Solution Requirements

1. Ability to configure mxe.pm.enforceMaximumDayOfMonthContinuity variable at a site level with a corresponding editable where clause similar to WO Generation Where Clause (MAXVARINPUT.WOGENWHERECLAUSE).
